## SKILLS

**LANGUAGES AND STACKS:** Javascript, Python, MERN

**DATABASES, TOOLS, AND LIBRARIES:** Pytorch, Tensorflow 2/Keras, MongoDB, AWS, Azure, Git/Bash

## EDUCATION

TOPS @ Marc Sept. 2017  
Garneau Collegiate to July  
Institute 2019

According to Maclean's Magazine, the TOPS Program at Marc Garneau Collegiate Institute is one of Canada's most prestigious math and science programs, offering a university level classroom experience.

AY Jackson Sept. 2019 to  
Secondary School Current  
OSSD 2021

## COURSES

CS50 · Harvard EdX

Dove into the fundamentals of computing, building up basic knowledge of algorithms, data structures. Learned C, C++ in the process.

Machine Learning  
Coursera (Stanford University)

Completed Andrew Ng's course on Machine Learning (Coursera). This taught me many of the basic concepts, intuition, and theory behind machine learning algorithms.

## EMPLOYMENT

Skintelligent Pte Ltd.

Machine Learning Developer Intern (Remote)

Singapore, Singapore

Aug. 2019 to Oct. 2019

- Built image preprocessing pipeline and multi-task learning model for Phase 1 deployment using TensorFlow 2.0.
- Deployed multi-task image classification model for Chanel Beauty, to be used with a recommendation engine for skincare products.

Ascendbuild (Next36, 2020)

Software Engineering Intern

Toronto, Ontario  
Mar. 2020 to Current, Mar. 2020 to Current

- Designed and built front-end platform with React and Mapbox GL for 30 beta users.
- Integrated geospatial search algorithm with React front-end and optimized for large geospatial data throughput
- Deployed MERN web app through AWS Elastic Beanstalk to serve over 30 beta users.
- Built process for users to sign up, buy a subscription, and use the product, utilizing Stripe API, Google Auth, and AWS DynamoDB.
- Designed Property Growth Index using various statistical methods such as regression analysis, normalization, and variance.

## PROJECTS

Neurascale - Super Resolution GAN built with Tensorflow 2

Jan. 2019

- **Winner of Tensorflow 2.0 Hackathon on Devpost.**
- Used the (at time) brand-new TF2.0 framework to design and build a Super-Resolution Generative Adversarial Network based on the "Photo-Realistic Single Image Super-Resolution Using a Generative Adversarial Network" paper published in 2017.

Synbiolic - AI Drug Discovery Platform

Nov. 2019 to Feb. 2020

- **Placed top 5 of 28,000 contest in the Microsoft Imagine Cup (North America Finalist)**
- Utilized Azure ML Rest APIs to host a Stacked RNN for small molecule generation.
- Used Azure VMs to host MERN web applications serving as front-end for our platform.
- Utilized IBM's RXN framework for retrosynthesis pathway prediction.

## EXPERIENCES

DMZ · DMZ Fellow

Toronto, Ontario

Participated in the DMZ Basecamp program as a co-founder of Autophase, an AI assisted tool that aims to help founders save time and focus on priorities by automating the creation of promotional materials and infographics. Received mentorship, guidance, and feedback from founders and investors. Attended various events and workshops to network and learn how to best develop and pitch a product.

Dalla Lana School of Public Health, University of Toronto ·

Summer Institute Student

Toronto, Ontario

Program designed to introduce students to ideas and issues in public health and healthcare with a multidisciplinary approach to education. Guided by educators specializing in eHealth Innovation at the UHN (University Health Network).
